Laboratory note: The estimated concentration of the unknown peak in the sample is 4.46% | Currently PharmLabs laboratory can not confirm an unidentified peak in your chromatogram due to interference (only with highly concentrated D8 products) from which we believe to be either (+)d8-THC or 49-THC. At this time there are no reference standards available for (+)d8-THC is a different compound from the main (-)d8-THC cannabinoid and, therefore, these two compounds may have different efficacies. Using the most advanced instruments and techniques available, the separation of (+)d8-THC and 49-THC is a different community as a whole. PharmLabs believes the unidentified peak to be a combination of (+)d8-THC and 49-THC with the majority, if not all, of the concentration being (+)d8-THC. Total d8-THC is a different of the 48-THC and 49-THC with the majority, if not all, of the concentration being (+)d8-THC. Total d8-THC is a different of the 48-THC and 49-THC with the majority, if not all, of the concentration being (+)d8-THC. Total d8-THC is a different of the 48-THC and 49-THC with the majority, if not all, of the concentration being (+)d8-THC. Total d8-THC is a different of the 48-THC and 49-THC with the majority.
